Business & Technology Architect | IT Leader | Security, GRC & Modernization

Architecture and IT leader with cross-domain experience spanning business, process, data flow, applications, infrastructure, and security. Leads modernization by connecting operating needs to practical architecture, governance, and execution. Brings a strong record of improving control maturity, simplifying complexity, and delivering durable technology outcomes across healthcare, education, insurance, utilities, and consulting environments. Uses structured architecture methods, including TOGAF and Catalyst, to design cloud-aligned governance, risk, compliance, and modernization architectures that reduce ambiguity and turn complex systems into governed, viable outcomes. Grounded in business architecture, translates business entities and operating needs into people, process, and technology requirements supported by conceptual, logical, and physical models.

Core Competencies

Business, Process, Solution, Application, Technical, Infrastructure & Data Flow Architecture; Conceptual / Logical / Physical Modeling; TOGAF, Catalyst, NIST CSF and AI RMF, ISO 27001, SOC 2, COBIT, CIS Controls, ITIL; IT & Security Governance, GRC, Risk Management, Policy & Standards, Audit Readiness, Vendor Risk, AI Governance, Responsible AI, Data Governance; Cloud Alignment, Modernization, IAM, Microsoft 365, Azure, AWS, OT / SCADA, Program Leadership, Stakeholder Alignment

Professional Experience

Ruffalo Noel Levitz | Security & GRC Architect / Business & Technology Architect | 6/2023 to 10/2025

- Served in a de facto acting CISO capacity driving enterprise risk reduction, audit strategy, vendor risk management, and client/regulator assurance; built evidence cycles, compliance scorecards, governance cadence, and a centralized risk register that reduced client assurance timelines by 30%.
- Led security, GRC, and business/technology architecture across compliance, cloud, identity, infrastructure, and product, converting complex ecosystems into exec-ready models that accelerated alignment and decisions.
- Helped establish Responsible AI governance using NIST CSF and AI RMF to support FERPA and PHI constraints.
- Authored the RNL Edge logical reference model for AI platform integration, including TitanML, DataGPT, microservices, chatbot engine, custom APIs, MongoDB Atlas, segmentation, and scalability patterns.
- Designed and governed AI and CHD platform/data segmentation and isolation using Entra ID, MFA, and SSO across AWS, on-prem, IBM Cloud, and Azure as repeatable audit evidence.
- Designed Product Baseline Security Controls mapped to PCI, NIST, HIPAA, and TX-RAMP and improved operational maturity through DLP, runbooks, diagrams, process flows, and audit documentation.
- Built conceptual, logical, and physical architectures for cloud, identity, segmentation, and data flows, integrating MXDR, SIEM/SOAR, IAM/PAM, ITOps, SecOps, DevOps, and DevSecOps into unified operational and audit cycles.

South Jersey Industries (SJI) | Infrastructure & Security Manager | 7/2022 to 2/2023

- Led modernization of IT and OT infrastructure supporting SCADA, telemetry, and field operations across 100+ locations, 240+ circuits, and redundant connectivity to 2 data centers.
- Rebuilt the infrastructure team into focused service pillars across compute, networking, storage, patching, telecommunications, telephony, and support, improving ownership and operational accountability.
- Shifted operations from reactive to proactive by optimizing SolarWinds and ServiceNow monitoring, alerting, and service workflows across a distributed multi-carrier environment.
- Directed Sev1 incident response, escalations, root cause analysis, and capital/operational initiatives including TSA/TCIP, LNG/RNG, audits, upgrades, and cross-team infrastructure enhancements using ITIL/ITSM.
- Led vendor and partner oversight across Cisco, Fortinet, VMware vCenter, Rubrik, Citrix, Linux, Windows, SQL, SharePoint, Azure, and Microsoft 365 in a highly matrixed environment.

LIO Insurance | AVP, Program Delivery | 11/2021 to 05/2022

- Operationalized the data-science workflow supporting actuarial-driven risk and loss models by defining workstreams, governance cadence, and key artifacts, including a hypothesis bank, dataset and data lake

tracking, and signal sourcing across crime, proximity, semantic, and property-level inputs to support scoring and pricing model iterations, data normalization, and QA.

- Translated business, analytics, and operational needs into solution flows and process models that improved SOP quality, workflow clarity, and readiness across portal, analytics, and collaboration initiatives.
- Led cross-functional delivery across Product, Engineering, Data, and Operations for portal and collaboration initiatives in an insurance startup, improving execution cadence, dependency management, and handoffs.
- Standardized delivery and collaboration practices using SharePoint, Teams, Okta, Jira, and Confluence, and transitioned new initiatives into IT with stronger runbooks, access patterns, and support readiness.

Talkiatry | VP Infrastructure / Director Product Management | 11/2020 to 11/2021

- Built a 100 percent cloud-based infrastructure that supported rapid growth from 21 to 100+ staff; improved Microsoft security score from 25 to 80 percent in 60 days through SSO/SAML, MDM/EDR, hardened M365/Azure and DNS configurations, and Azure AD policies, enabling full remote telepsychiatry operations and PCI compliance with HIPAA/HITECH safeguards mapped to NIST.
- Migrated the organization from Google Workspace to M365/Azure, established scalable identity and application governance, built and mentored the technical support team, and standardized incident, change, and support workflows across Jira, Zendesk, Teams, and eClinicalWorks.
- Implemented HL7 interfaces for DFT/ADT/SIU/ORU and SFTP workflows to strengthen clinical interoperability.

PMHCC (City of Philadelphia Health Dept) | Infrastructure Architect & Technology Manager |10/2012 to 6/2020

- Led architecture, security, and technology management for the Electronic Health Records program across Ambulatory, Lab, and Prisons environments, supporting HIPAA, CJIS, Vendor, and annual SRA requirements.
- Produced conceptual, logical, and physical architecture models for EHR, infrastructure, interfaces, and future-state solutions, aligning City OIT, operations, and clinical stakeholders with supportable designs and delivery.
- Directed program planning and operational governance across Business Continuity, Disaster Recovery, monitoring, incident, change, risk, and service delivery, helping move the organization from reactive support to a more proactive ITIL-based operating model.
- Re-architected and supported clinical and diagnostic integrations (ADT/ORM/ORU) interfaces for Radiology, Mammography, Pharmacy, and Lab with ongoing root cause analysis, outage response, and production support.
- Built technical specifications, test plans, configuration workbooks, reporting, and operational metrics for eClinicalWorks, SharePoint, SysAid, monitoring, eBO, SQL Reporting Services, device integrations, and HIE.

Earlier Career Highlights

- Led infrastructure, support, continuity, and operational improvement efforts across regulated healthcare and hybrid enterprise environments, including direct team leadership, continuity, and service modernization.
- Managed consulting and delivery teams in business-unit leadership roles involving recruiting, retention, staff development, financial planning, forecasting, partner management, and technology strategy.
- Supported enterprise programs and initiatives for organizations including CIGNA, Canon, Comcast, CDI, and CSC, with experience spanning Microsoft platforms, integration strategy, service delivery, and business operations.
- Consulting experience includes chemical, energy, and manufacturing clients including DuPont, DuPont Dow Elastomers, Equiva, PECO, and PP&L, building familiarity with operational and industrial environments.

Education & Certifications

- Bachelor of Science, Business Administration (Operations Management) - West Virginia University
- Certifications and Attestations: PMP, ITIL, MCSE, Microsoft Azure Fundamentals (AZ-900), ISC2 Certified in Cybersecurity (CC), HIPAA/HITECH, PCI DSS, SOC 2, TX-RAMP, *CISSP in progress*

Community Leadership and Non-profit

- Board and community leadership experience through Middletown Township Parks & Recreation, Efasce di Philadelphia, and eCWusers.com community platform administration.
- Youth sports official and assignor, including soccer, ice hockey, and ball hockey.
- Volunteer service and mentoring through Boy Scouts of America as a Merit Badge Counselor from 2015 to 2022, supporting multiple merit badges, Eagle candidates, and Cyber Chip development.

Daniel Giacomelli Executive Summary

Business & Technology Architect | IT Leader | Security, GRC & Modernization

Identity Statement

Business and technology architect who turns complex environments into governed, executable outcomes by aligning business needs, people, process, data flows, applications, infrastructure, and security. Grounded in business architecture, brings practical leadership across modernization, governance, and delivery in regulated and service-intensive environments. Known for reducing ambiguity, improving control maturity, and translating cross-functional complexity into clear operating models, architectural viewpoints, and structured execution.

Core Leadership Profiles

Business & Technology Architect: Aligns business needs, people, process, data flows, applications, infrastructure, and security into governed, executable outcomes. Works across conceptual, logical, and operational viewpoints to reduce ambiguity, structure decision-making, and translate complexity into architectures and operating models that can actually be implemented and sustained.

Security, GRC & Modernization Leader: Leads governance, risk, compliance, and control maturity efforts as part of modernization, with clear alignment to execution, accountability, and operational readiness. Brings practical experience designing policies, standards, controls, evidence cycles, and operating mechanisms that strengthen audit readiness, accountability, decision quality, and execution across regulated and service-intensive environments.

Transformation & Delivery Leader: Turns ambiguity into structured execution through roadmaps, governance cadence, cross-functional alignment, and delivery leadership. Connects strategy, architecture, and operational realities to help organizations move from reactive effort to proactive, supportable operating rhythm across complex environments.

Leadership Style and Operating Approach

Brings a people-first, business architecture-grounded leadership style to complex environments where progress depends on more than technology alone. Approaches transformation through the realities of people, process, accountability, risk, and organizational dynamics, using architecture, models, and governance as practical tools for alignment and execution. Known for making the invisible visible, creates shared understanding across executives, operators, security, and technical teams by exposing dependencies, clarifying risk and tradeoffs, and translating ambiguity into actionable direction.

Works in a hands-on, structured, and cross-functional manner that connects strategy to operational reality. Builds momentum by defining current-state conditions, shaping practical future-state direction, and establishing governance cadence, ownership, and delivery rhythm that teams can sustain. Leadership style reflects mentorship, accountability, and continuous improvement, with a consistent focus on turning reactive environments into more proactive, supportable, and measurable operating models.

Value Creation

Delivers strongest value in complex, high-risk, or cross-functional situations where organizations need clearer structure, stronger leadership alignment, and more disciplined execution across business, operations, and technology. Particularly effective where architecture-first governance, modernization discipline, and cross-functional translation are needed to turn ambiguity into measurable progress. Most often contributes by:

- assessing current-state architecture, risk posture, and operating models
- defining future-state models and prioritized roadmaps
- establishing governance, reporting, and delivery cadence across teams
- partnering with executives and technical leaders to strengthen alignment and accountability
- staying engaged through execution to ensure outcomes hold
- producing decision-ready models and diagrams that make tradeoffs visible and execution measurable

Career Transition Context Summary

Professional context regarding recent role changes and organizational transitions for Daniel Giacomelli

Executive Context Summary

Daniel Giacomelli's career history reflects a long-standing pattern of loyalty, commitment, and sustained contribution, even if that is not immediately obvious from a quick review of more recent role dates. Over the course of his career, he has consistently demonstrated a preference for longevity, the ability to build and retain relationships based on trust, and a commitment to contributing over time, including approximately seven years with CSC, five years with Cigna, and seven years with the City of Philadelphia. Taken together, those roles establish that his natural professional pattern is not short-term movement, but durable commitment.

The shorter transitions in the more recent part of his career should be understood in that context. They reflect a period in which several moves were shaped by business conditions, organizational shifts, evolving role scope, and circumstances that did not always support long-term continuity, rather than a preference for frequent job changes or instability. Since leaving the City, those changes were not primarily driven by a desire to keep moving. In several cases, they were driven more by the realities of the environment than by a decision to leave otherwise stable long-term situations.

What remains consistent across the full arc of his career is a strong cultural and operational loyalty ethic. Colleagues and friends would reasonably describe Daniel as loyal, steady, and committed to the organizations and people he supports. That quality is real, but it is not fully visible if recent dates are read without context. The purpose of this document is to provide that context clearly and directly, so the overall career pattern is understood accurately.

From the City of Philadelphia forward, Daniel Giacomelli's career transitions are best understood in context:

- **City of Philadelphia:** COVID-era budget cuts, combined with consultant status and residency constraints, ended what likely would have remained a long-term role.
- **Talkiatry:** Daniel chose to leave due to long-term misalignment around governance, compliance, and operating philosophy.
- **LIO Insurance:** A strategic reset narrowed focus back to core business priorities, materially changing the role he had been hired to support.
- **South Jersey Industries:** Capital and portfolio pressures led to reductions that included Daniel in an early round.
- **Ruffalo Noel Levitz:** Post-acquisition integration created overlap and role redundancy within the combined organization.

Taken together, these transitions reflect business conditions, strategic realignment, leadership change, and long-term fit, not a preference for short-term movement.

Ruffalo Noel Levitz (RNL) Context

Daniel Giacomelli joined Ruffalo Noel Levitz to lead infrastructure, but almost immediately shifted into a more urgent business priority when RNL's PCI attestation was at risk. Recognizing the significance of that risk and potential business impact, he agreed to the executive ask and took leadership of PCI and cybersecurity efforts to help stabilize the situation, strengthen the control environment, and support a successful attestation outcome.

That initial assignment expanded over time into a broader role spanning information security, governance, risk, compliance, and shared infrastructure service management. In practice, the position evolved well beyond its starting scope, reflecting the organization's changing needs and the need for experienced leadership during a period of operational and structural transition. His focus remained on solving business problems, reducing risk, and building a leaner, more effective security and compliance function.

After Encoura acquired RNL, the combined company had a larger and more mature security, audit, and IT structure. As part of the post-acquisition integration, overlapping functions and leadership roles were consolidated, and Daniel's position was determined to be redundant within the new organization. His departure occurred as part of that broader acquisition-related reduction and was not performance-related.

Daniel remains very positive about the experience and the people at RNL. He was brought in to address critical priorities, expanded his scope where the business needed it most, and helped lead an important transition with a focus on results, stability, and risk reduction. His time there is best understood as a successful contribution during a period of major business change that ultimately ended in post-acquisition consolidation.

South Jersey Industries (SJI) Context

Daniel Giacomelli joined South Jersey Industries to help strengthen IT and OT infrastructure management, operational support, and program delivery across a range of development, security, audit, and attestation-related initiatives. The role addressed real operational needs within a complex utility and energy environment.

Within a short period, leadership recognized his ability to build trust quickly, work effectively across technical and business teams, and manage complex initiatives. As a result, his scope shifted from the initial infrastructure focus to include support for alternative and green energy programs, including offshore wind, solar, and renewable natural gas initiatives tied to government-supported and capital-funded efforts.

As those programs evolved, several became exposed to changing government priorities, administrative and political shifts, community resistance to certain developments, and significant scope and budget challenges within parts of the broader portfolio. The resulting capital and funding pressure led to rapid organizational adjustments and reductions. Daniel was included in an early round of those reductions as part of the company's response to broader portfolio and funding pressures, not due to performance.

Daniel remains very positive about the experience and the people at SJI. The role broadened his exposure to OT, SCADA, utility operations, and energy-sector program dynamics, and he continues to value both the learning and the relationships that came from that chapter. He understood the environment, remained supportive of the organization through a difficult period,

and was part of the practical adjustments the company had to make in response to changing conditions.

LIO Insurance Context

Daniel Giacomelli joined LIO Insurance through a trusted long-standing professional relationship to help execute an ambitious early-stage growth strategy centered on innovation, data science, and expansion beyond traditional Property and Casualty lines. He was hired as Assistant Vice President to support program and delivery leadership across broad portfolio that included cyber, liability, group, event, sports, healthcare, and auto.

At the time, the company's strategic direction emphasized long-term platform building and broader insurance innovation rather than short-term optimization of the core Property and Casualty business. Daniel's role was aligned to that longer-horizon strategy and the operational execution required to support it.

That direction changed after the company missed key near-term Property and Casualty performance targets. Ownership responded by narrowing focus and shifting away from broader innovation and expansion efforts toward immediate tactical correction in the core P&C business. The strategic reset accelerated further following a CEO change, and Daniel was released within weeks as the company moved quickly to realign around immediate core-business priorities. Although there was an effort to reposition him into the narrowed core business, the shift came too late to overcome the broader change in direction.

His departure was therefore the result of a rapid strategic and leadership reset, not performance. Daniel continues to view the experience positively, values the relationships that came from it, and sees it as an important chapter in working within founder-led, innovation-oriented, and fast-changing business environments.

Talkiatry Context

After his tenure with the City of Philadelphia, Daniel Giacomelli was recruited directly by Talkiatry's CEO to join the startup as Vice President of Infrastructure. He was brought in to help scale the technology foundation of a rapidly growing telepsychiatry business during the pandemic and quickly contributed across infrastructure modernization, vendor and partner management, EHR expansion, and operational enablement.

During his time there, Daniel helped lead the migration from Google to Microsoft, strengthened the supporting technology ecosystem, and helped the company expand rapidly across the United States while maintaining an effective remote operating model. The role drew on both his infrastructure leadership and his ability to build trusted relationships that accelerated execution in a high-growth environment.

Over time, however, Daniel concluded that the company's evolving leadership priorities were no longer sufficiently aligned with his standards for governance, compliance, patient-centered responsibility, and long-term sustainability in a healthcare setting. At the same time, organizational expectations around location, travel, and operating model also shifted, further reducing long-term fit.

His departure was therefore a values- and fit-based decision, not a reaction to role difficulty, performance, or business pace. Daniel remains positive about the work accomplished there and

views the experience as an important chapter in scaling a healthcare technology organization during a period of significant growth. At the same time, the experience further clarified that Daniel's strongest long-term fit is in organizations with greater operational maturity, governance discipline, and leadership stability than is typically found in startup environments.

City of Philadelphia Context

Daniel Giacomelli spent seven years supporting the City of Philadelphia's Department of Public Health in a consulting leadership capacity and would likely still be there if not for the COVID-era budget reductions that affected the City and its departments. His departure was not the result of performance, fit, or a desire to leave. It was a direct consequence of pandemic-driven budget cuts and the City's resulting reduction of external consulting and contractor resources.

As a consultant working through an approved talent structure rather than as a direct City employee, Daniel was particularly exposed to those budget actions, even though the Department of Public Health, Police, Fire, and emergency-related functions were among the less heavily affected areas. He was given several months of notice and was encouraged to pursue other roles within the City, including multiple opportunities within OIT and other departments. However, those paths generally required conversion to direct City employment and establishment of Philadelphia residency, which was not practical for him given his existing family and residential commitments in Bucks County.

During his time with the City, Daniel built exceptionally strong relationships and took on a broad and trusted role that extended well beyond a single department. In addition to his core public health responsibilities, he was asked to work across related organizations and stakeholders, including OIT, prisons, the Medical Examiner's Office, laboratory functions, air management, and external public-sector partners. During the pandemic, he also helped support critical health and first-responder-related systems and played a meaningful role in helping the organization adapt to a remote operating model under extraordinary conditions.

Working successfully in the City also required navigating a highly complex political and administrative environment. It was often said that if you could work effectively through that level of change and make it through an administration transition, you could succeed almost anywhere. Daniel's long tenure there reflects not only technical and operational contribution, but also resilience, adaptability, and the ability to build trust in a demanding public-sector setting.

Daniel remains deeply positive about his time with the City and still views it as one of the most meaningful chapters of his career. He stayed because he believed in the mission, valued the people, and was committed to serving where he was needed most. If not for the pandemic-driven budget reductions and the structural constraints tied to consultant status, employee conversion, and residency requirements, he would likely still be there today.

Taken together, these experiences clarified the type of environment in which Daniel Giacomelli is best positioned to contribute over the long term: organizations that value operational maturity, trusted relationships, ethical leadership, governance discipline, and sustainable execution. His broader career history shows that when those conditions are present, his pattern is loyalty, longevity, and sustained contribution. This document is intended to provide context for recent transitions so that pattern is understood accurately.
